

PHIL DINH

SUPPLY CHAIN ANALYST

Sydney, Australia | phildinhdata@gmail.com | 0451 840 818 | **Portfolio** | **LinkedIn** | **GitHub**

Supply Chain Analyst with **4+ years** across FMCG and supplement industries, covering demand and supply planning. Builds end-to-end automated Excel simulation models (weekly and monthly cadence) that project stock cover, container load, and order impact ahead of time, and Power BI reports that track forecast accuracy, sales, and PO performance to catch risk early. Turns this analysis into replenishment decisions that keep operations and sales teams ahead of stockouts and overstock across multi-site, high-SKU environments.

TECHNICAL SKILLS

- BI & Analytics: Power BI (DAX, Power Query, data modelling)
- Programming: SQL, Excel (VBA), Python
- Forecasting Tools & ERP: Anaplan, Microsoft Dynamics 365, Metcash ERP

WORK EXPERIENCE

ETTASON (FMCG distributor) | Demand Coordinator & Analyst | Sydney, Jul 2025 - Present

- Led end-to-end forecasting and reporting across 5 offices and 3,000+ SKUs, building Excel simulation models and Power BI dashboards that gave Operations a single, reliable source for day-to-day stock and supply decisions.
- Automated manual reporting workflows using Excel (VBA), Power Query, Python, and SQL, cutting weekly report prep time by 70%.
- Built a four-level sales performance report for NZ (Overall, Business Unit, Company Chain, Customer) in Power BI, tracking quantity, amount, and margin with YTD vs PY and % of total breakdowns, giving NZ the same drill-down visibility Sydney already had.
- Built a multi-tier forecast accuracy system in Power BI (1-month, 6-month, and 12-month WMAPE and FC_Attainment) with automated logic to surface high-risk items and recommend forecast adjustments, giving NZ a consistent, data-driven review process.
- Partnered with NZ's General Manager to benchmark and adjust Anaplan forecasts against sales history, prior-year trends, and known promotions, correcting under-forecasted items and unexplained changes before they reached the business.
- Combined NZ's forecast, SOH, months of cover, and ABC classification to recommend PO quantities by item, brand, and container, presenting findings to the Demand Planning Manager for review and final approval.

JUNG TALENTS (Analytics consultancy) | Data Analyst | Sydney, Feb 2024 - Jun 2025

- Collaborated with senior data analysts and external retail clients to gather reporting requirements, validate data accuracy, and deliver 10+ Power BI reports tracking sales and operational performance.
- Analysed e-commerce sales and revenue trends across categories, SKUs, and channels using YoY/MoM analysis, identifying a stockout-driven revenue drop and proposing improved stock allocation.
- Analysed customer demographic and location data (city, age, gender) to understand where customers were based and who they were, supporting more informed channel and regional decision-making.

IGA (Grocery retail) | Assistant Store Manager | Sydney, Mar 2022 - Feb 2024

- Monitored sales trends and used 6-month demand forecasts generated by the Metcash ERP to refine weekly order quantities, aligning stock levels with anticipated demand and contributing to a 20% reduction in overstock and write-offs.
- Conducted regular stocktakes and maintained FIFO stock rotation, coordinating with staff to ensure inventory accuracy and minimise spoilage and shrinkage across the store.

BEST NUTRITION COMPANY LIMITED (Supplement distributor) | Inventory & Logistics Coordinator | Vietnam, Feb 2019 - Sep 2021

- Managed replenishment for 100+ SKUs using ABC classification, safety stock, reorder points (Min), and supplier coordination on order quantity (MOQ) and container load (CBM), achieving ~90% stock availability.
- Determined order quantities for new products lacking sales history, collaborating with Sales and Marketing on promotions and reserved orders, upsizing containers when justified to lower freight cost and avoid stockouts during demand spikes.
- Oversaw warehouse operations, including receiving, ERP data entry, and stocktakes, preparing and organizing stock for efficient order fulfillment and delivery.
- Selected delivery methods for outbound logistics (motorbike, truck, train, or bus) based on order size, distance, and cost, balancing timely delivery with shipping costs.

PROJECTS

End-to-End Retail Analytics Platform | PostgreSQL, dbt, Airflow, Docker, Power BI | [Link](#)

- Designed and built a nightly-orchestrated analytics pipeline (PostgreSQL, dbt, Airflow, Power BI) simulating a Dynamics 365 retail data warehouse, including a tested star schema with SCD Type 2 history for customer and product dimensions, row-level security, and drill-through reporting comparing actual vs. target performance to surface underperforming products and regions.

EDUCATION

- Master of Marketing | University of Wollongong | Feb 2023 - Oct 2023
- Master of Supply Chain Management | University of Wollongong | Sydney, Oct 2021 - Nov 2022
- Bachelor of Supply Chain Management | University of Transportation | Vietnam, Feb 2015 - Jul 2019

CERTIFICATIONS

- PL-300 (Microsoft Power BI Data Analyst) | DP-600 (Microsoft Fabric Analytics Engineer) | Anaplan Model Builder Level 1 and 2
